Art Unit: 1755

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 3-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 3-8 recite an intended use of the material of claim 1. It is unclear how these recitations are intended to further limit claim 1. There is no teaching in the application as filed pointing out chemical or structural limitations that would be introduced by the recitation of the intended use.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by US 5094828.

The reference teaches a positively charged (see column 6, line 30) microporous silicophosphate material useful for anion exchange. The reference does not explicitly set forth the framework density with respect to claim 2. The similar starting materials used and similar process steps performed would be expected to produce a material exhibiting a framework density similar to the instant claims.

Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by US 4898722.

The reference teaches a positively charged (see column 2, lines 32-36) silicoaluminophosphate (SAPO-37, having a framework structure FAU) useful for anion exchange. The "Database of Zeolite Structures" document cited provides convincing evidence that the framework density of the SAPO-37 material of US 4898722 is 13.3.

The references relied upon are representative of the closest prior art.

Claims 9-30 are allowable over the prior art of record. The prior art of record does not teach a method for the synthesis of a positively charged framework silicophosphate material including reacting

a two phase system comprising a phase transfer agent and a buffering agent in addition to an organic phase comprising an organosilicon, an aqueous phase comprising a phosphoric acid and a structure directing agent.
